

ABSTRACT

5 The invention relates to a novel use of compounds  
having formula (I), including mifepristone (RU 486  
or RU 38 486) and the derivative salts thereof,  
for the preparation of a medicament that can  
modulate(activate or inhibit) the Hedgehog protein  
signalling pathway, which is intended for the  
treatment of pathologies involving a tissue  
10 dysfunction linked to deregulation of said  
pathway.
